03

Overview

Timeline

We are here to support you!

Paul León
Data Engineer

Antonio González Dumar
Analytics Engineer

Brandon Rodríguez
Data Analyst

Cindy Lobo
Technical Recruiter

Juan Jaramillo
Sr. Director Solutions Engineering

Diego Ralón
Machine Learning Engineer

Luís Bertozzo
Machine Learning Engineer

Diego Medina
Marketing Manager

By the numbers

750

EXPECTED PARTICIPANTS

~180

TEAMS FORMING

**JOIN 750+ ENGINEERS IN A 2-WEEK
CHALLENGE TO SOLVE REAL-WORLD
PROBLEMS WITH DATA AND AI**

03

Participant Briefing

10-Day Sprint - AI-First Banking Customer Service

The Challenge: Build An AI-First Banking Agent

Don't build a chatbot, build a customer-service system

TASK SELECTION

One Focused Banking Workflow

1. Account / Payment Inquiries
2. Card Support
3. Transaction Disputes
4. Credit-Product Info & Eligibility

END-TO-END WORKING PROTOTYPE

Build a fully functional production-ready prototype capable of handling complex user interactions beyond a surface-level demo

MULTILINGUAL SUPPORT REQUIRED

Demonstrate robust customer service interactions in both **Spanish** and **Portuguese** to serve LATAM banking needs

What Are We Looking For?

The system should be able to: Understand → Decide → Act → Verify → Escalate

MINIMUM REQUIREMENTS

- Maintain conversational context
- Clarify ambiguous requests
- Retrieve trusted information
- Use tools securely
- Execute appropriate workflows
- Verify that actions actually happened
- Know when NOT to act
- Hand off to a human when needed

Key idea: AI should not be autonomous just because it can be

Normal Case

Automated Resolution

Handles policy-compliant automated resolution, verified account queries, and authorized self-service transactions seamlessly

Ambiguous / Unsupported

Clarification or Abstention

Asks clarifying questions or practices safe policy abstention when handling missing parameters or unsupported banking requests

Human-Required

Safe Escalation

Executes a structured handoff to human representatives, transferring verified facts and open questions without dumping raw transcripts

Prove It Works

Baseline → Proposed System → Held-out Evaluation

TECHNICAL RIGOR

- **Data Quality & Contracts:** Strict input schema enforcement
- **Reproducible Preparation:** Deterministic pipeline execution
- **Valid Labels:** Grounded relevance judgments & ground truth
- **Leakage Prevention:** Strict train/eval set isolation
- **Appropriate Split:** Realistic held-out test distributions
- **Learned Component:** Benchmark against a baseline model

KEY METRICS TO MEASURE

- Safe Automated Resolution
- Unsafe Outcomes
- Cost Efficiency

Prove It Works

DATA-BACKED BASELINE

Justify workflow selection using reproducible logs

GROUNDED AI CORE

Ground all responses in verified records

CONTROLLED AUTOMATION

Enforce action permissions besides model prompts

DATA & ML DISCIPLINE

Repeatable pipelines with strict schema contracts

MEASURED FAILURES

Stress-test held-out cases against injection

ROUTE TO OPERATION

Deterministic setup with audit execution logs

No Single Skill Is Mandatory

DISCIPLINE	SUGGESTED TASKS
Artificial Intelligence	Production backend and structured JSON handoffs
Machine Learning	LLM/RAG orchestration and prompt injection defense
Data Engineering	Strong ETL/ELT pipeline and customer record isolation
Data Analysis	Demand patterns, and cost-per-resolution ROI

Make Your Result A Real Service

OBSERVABILITY

- Tracing
- Execution records
- Monitoring

RELIABILITY

- Bounded retries
- Safe fallback
- Tool failure handling

SECURITY

- Authentication
- Access controls
- Data retention

REPRODUCIBILITY

- Setup instructions
- Versioning
- Repeatable evaluation

AND BE HONEST ABOUT WHAT'S MISSING

- Capacity limits
- Data limitations
- Language coverage
- Deployment work
- Remaining risks

↗ FINAL TAKEAWAY

Build something that works, prove that it works, and know when it should not act.
And show us what it would take to make it real.

Details

Event Logistics

Communication!

We will add you to the Hackathon community in [Slack](#):

Recommendations:

- Keep in touch always with your team!!
- We have some preset Channels, join and explore them!
- We might create additional ones to share specific topics that may help you going through with the challenge
- We've set a technical discussions channel to get you in touch with mentors!
[#technical-help](#)

If you don't have a team you can participate by yourself but bear in mind that having a team will greatly improve your results

Submission Details

For your submission to be considered successful you should:

1. Share the link to your public* GitHub Repository using the following structure: [factored-hackathon-2026-\[your team's name\]](#)
2. Share a link to where your tool is deployed
3. Share a 4 - 6 Slides presentations with details on your tool
4. A short, mandatory video pitch demonstrating the working solution and explaining core architectural decisions.

Submit your tool no matter what!!!

Submit all of this to hackathon.admin@factored.ai

Event Logistics

You're free to use any language and/or set of tools you deem necessary!

Some (maybe) valuable resources:

[Microsoft Azure](#)

[Snowflake](#)

aws

[AWS](#)

[Databricks](#)

Evaluation Criteria

First and foremost our solution should work

Overall project rationale
and documentation

AI Engineering: Backend,
Frontend and Deployment

Data Analytics: Data
Quality and Providing
relevant insights from the
solution

Data Engineering: How are you dealing
with the Extraction and Transformation of
the data

Machine Learning: Model selection,
optimization, implementation and tracking

Code Of Conduct

We are an inclusive community

Violence and discrimination will not be tolerated

Remember we do have a [code of conduct](#)
